

Investigating a Malicious Disk Image using Autopsy

In this documentation, the malicious disk image is taken from a website. The source is given below:

<https://cfreds.nist.gov>

The size of the disk image is about 600 MB and it contains every information on what the disk had (including the user activity and the meta data),

Autopsy represents the disk image like a directory as shown in the above image.

The disk image had suspicious exe files, bat files, image and video found within. A suspicious file is tagged with a yellow badge.

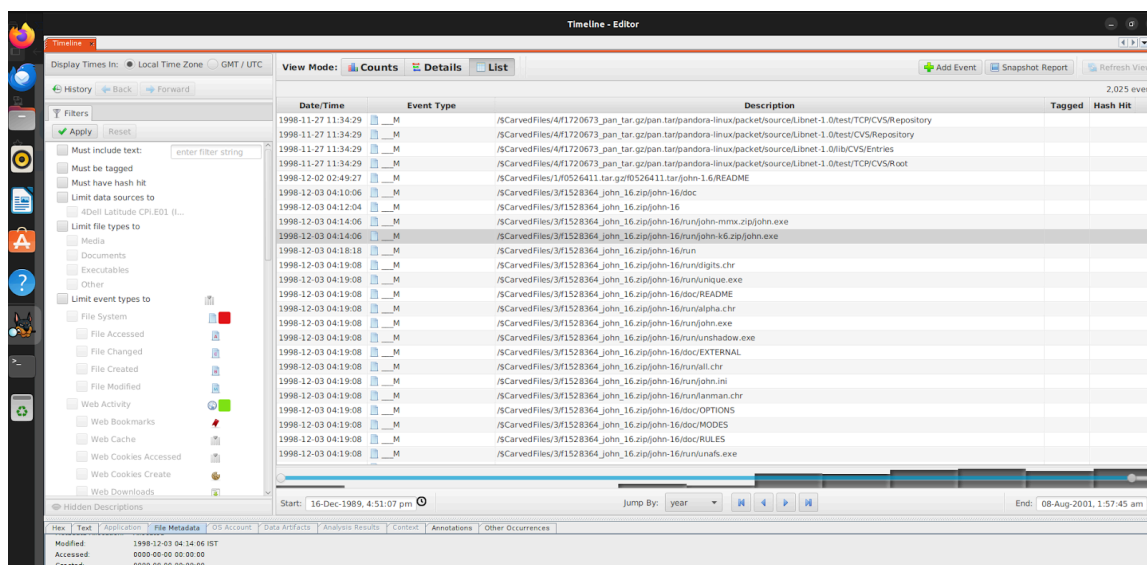

Malicious file findings in the disk image

During the documentation four malware files were found, all of them are trojan files. All of them are shown below

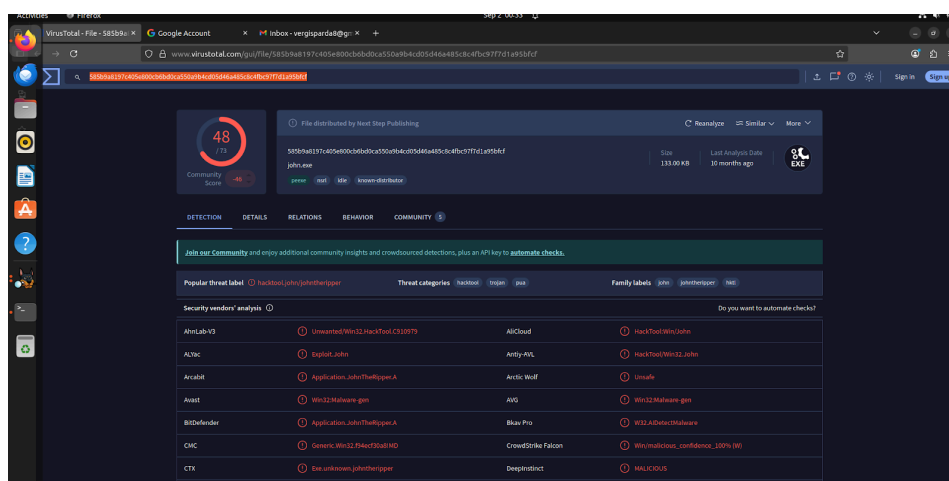

File name: john.exe

SHA-256: 585b9a8197c405e800cb6bd0ca550a9b4cd05d46a485c8c4fbc97f7d1a95bfcf

This was a supposed password cracker tool installed by the user, instead of loading the tool it started downloading images, videos, html and other exe files. Its a trojan file.

VirusTotal Result:

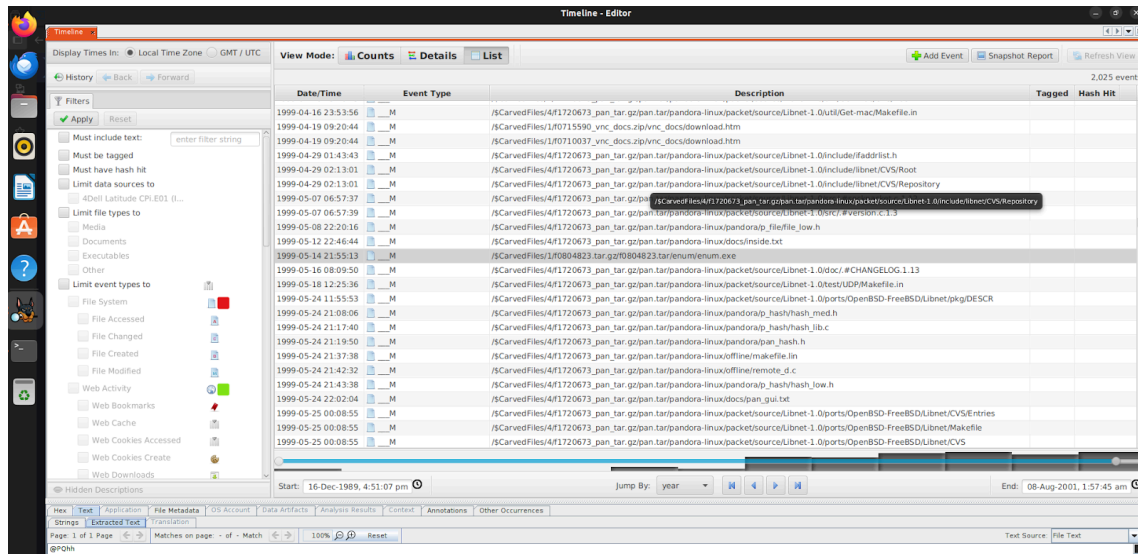

File name: enum.exe

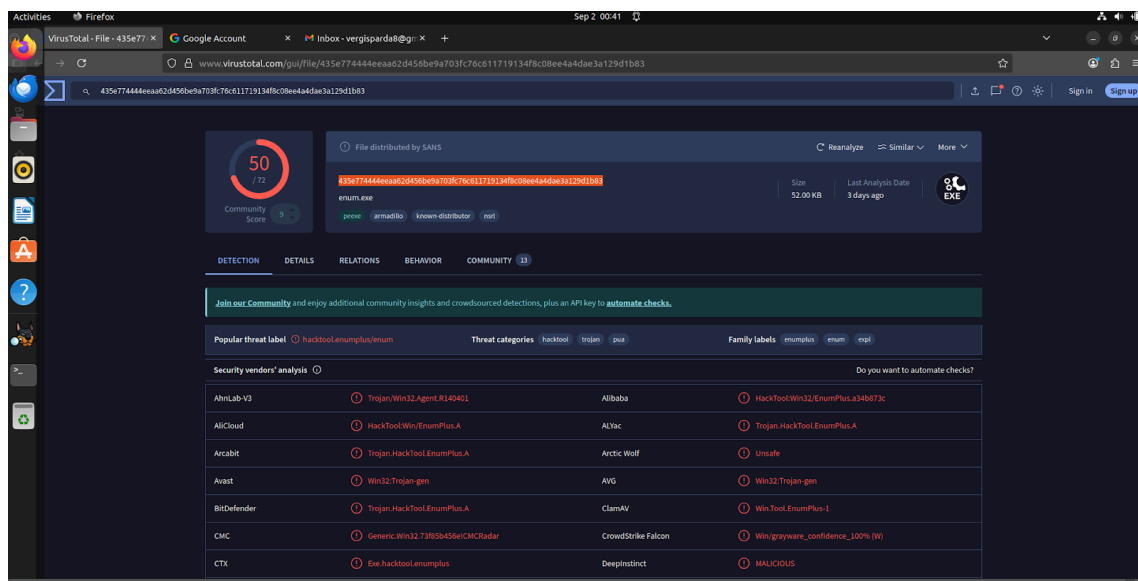

SHA-256:

435e774444eeaa62d456be9a703fc76c611719134f8c08ee4a4dae3a129d1b83

It's a trojan file disguised as a hacking tool . After the trojan file got executed, it started dropping multiple images, gifs, html files, javascript files and so on.

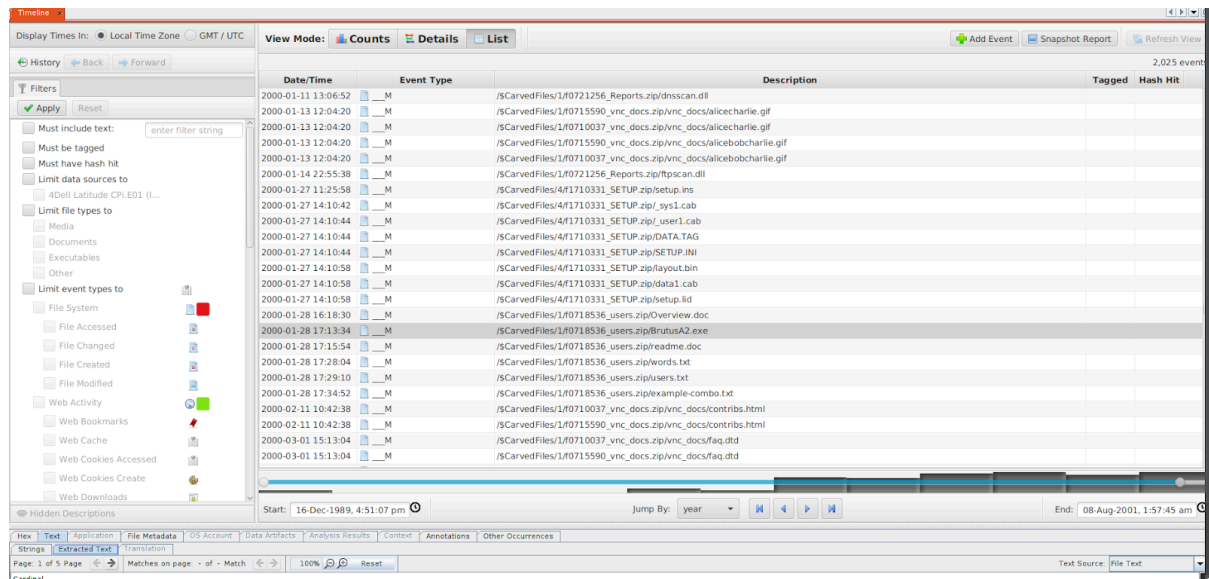

VirusTotal Result:

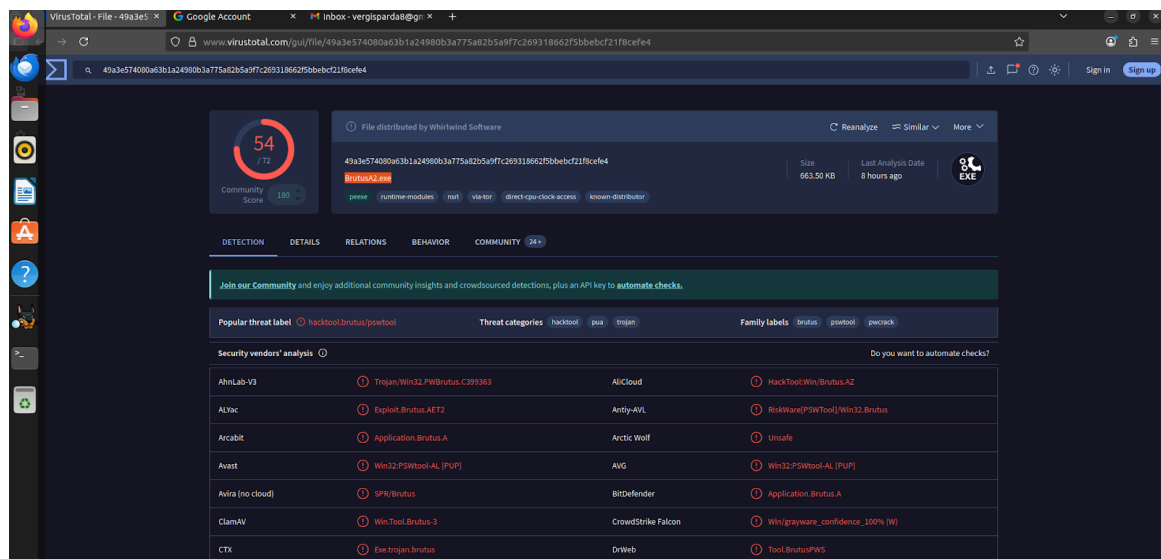

File name: brutusA2.exe

SHA-256: 49a3e574080a63b1a24980b3a775a82b5a9f7c269318662f5bbebcf21f8cfe4

This file was also a trojan disguised as a hacking tool. It also started dropping similar/same files as the other 2 trojans.

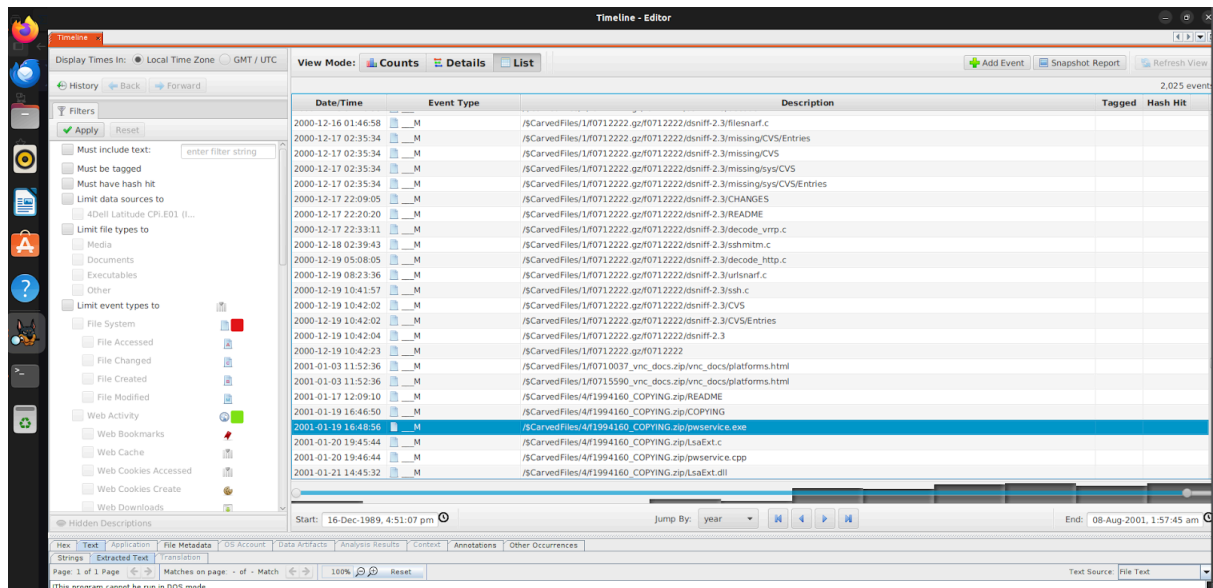

VirusTotal Result:

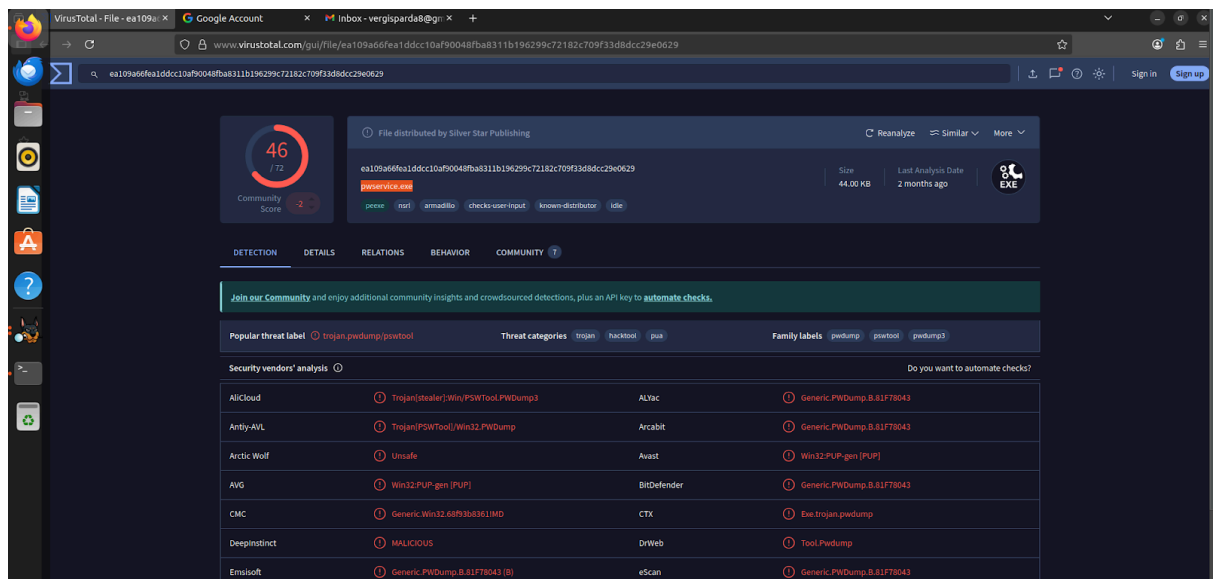

File name: pwservices.exe

SHA-256: ea109a66fea1ddcc10af90048fba8311b196299c72182c709f33d8dcc29e0629

This was also a trojan file disguised as a hacking tool. It only dropped .bmp files unlike the other 3 trojans.

VirusTotal Result:

It also suspiciously had high amounts of deleted files which were above 1k+. It might be because of the Trojans.

After the investigation is done, you can finally choose the generate report option where you can see the detailed report of the disk image incase if you would have missed anything during the investigation.
